

# TRACK DOLLIES Platforms

## Large platform

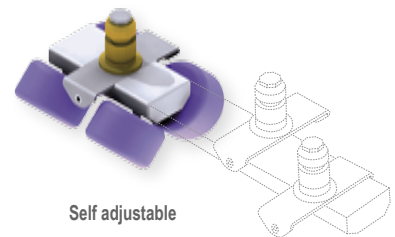

## Small platforms

## Skate wheels

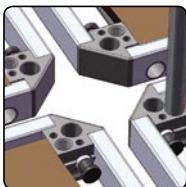

Normal

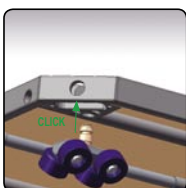

Self adjustable

For large platforms, the option of mounting a double push-bar (a KGS Development innovation) gives more precise control of movements.

All platforms are produced with 4 push-bar fixings. To facilitate storage, slots are provided in the chassis. They can also be used to facilitate transport.

Fixing the wheels to the chassis gives greater lateral stability to all dollies. The height of the wheels has been considerably reduced to avoid raising of the platform. The precise alignment of the wheels gives fast movement without vibration.
